

Technical Engineering Studies

- Technical engineering studies completed by KR Saline and TEP to refine the project description
- Project description refined to identify a point at which the proposed transmission line will tap into TEP's electrical system at a proposed switchyard. This proposed switchyard will tap the existing South to Green Valley 138kV transmission line and become the point of origin for the proposed transmission line
- Current plan of service does not include direct connection to Vail or South substations
- Study concluded that two components are required for the transmission line project
 - Power for construction from a proposed 138kV transmission line extending from existing Greaterville Substation to proposed Rosemont Substation
 - Power for operations from a proposed 138kV transmission line extending from proposed switchyard to proposed Rosemont Substation
