

Resource Sensitivity Levels Overview

- **Low:** potential resource constraints are minimal or absent, typically representing areas most desirable/compatible for construction/operation of transmission lines (e.g., industrial, vacant/undeveloped lands)
- **Low-moderate:** potential resource constraints are present, but conflicts or issues would likely be minimized with conventional design and construction methods (e.g., existing commercial, general planned residential areas)
- **Moderate:** potential resource constraints are present, but conflicts or issues would likely be reduced or minimized with conventional and non-conventional design and construction methods (e.g., agricultural [pecan groves], zone-approved residential areas)
