

Custom Fleet Advisory Services

Electrifying your fleet can reduce operational costs, boost driver satisfaction, and advance your organization's sustainability goals.

Our Custom Fleet Advisory Services can equip you with tools to launch or refine your fleet electrification journey.

DNV, working as a contractor for TEP, can support customers with Custom Fleet Advisory Services. This provides fleets with a custom analysis and roadmap for fleet electrification.

What will the analysis include?

- Vehicle-by-vehicle EV conversion options
- Total cost of ownership (TCO) comparison for EVs versus current fleet vehicles, inclusive of vehicle capital, maintenance, and fuel costs
- Evaluation of facility charging needs
- Charging infrastructure recommendations, including charger type and quantity, based on the identified short- and long-term electrification plan
- And more!

What is required of me?

- Participation from the appropriate stakeholders in your organization
- Information on fleet vehicles and fleet depots, such as:
 - Vehicle Identification Numbers
 - Vehicle usage/operation requirements
 - Facility usage patterns
 - O&M and fuel costs
 - Route details
- Cost share – TEP is sponsoring 80 percent of the cost for a limited number of fleets.

Only 6 spots are available – [apply today!](#)
